## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tagaya US 5,314,756 and further in view of Nee et al. US 4,869,971.

As to Claim 1 & 5, Tagaya '756 teaches rare earth magnets and the use of a dual layer protective film over the rare earth magnet (Col. 3, Line 25-49). Tagaya '756 recognizes the problems with pin holes associated with the protective layers but, is silent in regards to adjusting grain size in reduction of the number of pinholes (Col. 3, Line 25-49). However, Nee et al. '971 discloses a multilayered nickel alloy and adjusting the grain size between layers (Col. 3, Line 34-47) in order to improve mechanical properties. It would have been obvious to one skilled in the art to adjust the grain sizes of the Tagaya '756 rare earth magnet protective layers in order to improve mechanical properties as taught by Nee et al. '971.

As to Claim 2, Tagaya '756 discloses a first protective layer of 0.5 microns (Col. 7, Line 50-57).

As to Claim 3, Tagaya '756 discloses growing the protective film in a columnar direction (Col. 9, Line 11-45).

As to Claim 4, Tagaya '756 discloses the advantages of using nickel plating on rare earth magnets (Col. 1, Line 33-44).
